Fund Statistics

Total Net Assets	\$128,529,721
# of Portfolio Holdings (excluding derivatives)	6
Portfolio Turnover Rate	638%
Investment Advisory Fees (Net of fees waived)	\$954,361

Fund Investment Approach

The Fund is model driven, utilizing the Adviser's "long" volatility model for 75% of the net assets and the Adviser's "short" volatility model for 25% of the net assets.

- The Adviser's long volatility model is primarily a volatility trend-following model, typically seeking larger exposures to volatility assets when equity market volatility is increasing and smaller exposures to volatility assets when equity market volatility is decreasing.

- The Adviser's short volatility model utilizes both mean reversion and trend-following aspects, seeking to increase short exposure to volatility assets after increases in equity market volatility, when it may be trending back downward. It also generally maintains some short exposure to volatility assets at most times, in order to profit from the "decay," or long-term downward trend in volatility assets, with the remaining assets in long-dated US Treasuries and/or cash and equivalents.

The blend of 75% and 25% is intended to seek favorable long-term risk-adjusted returns, with an objective of long-term capital appreciation. In order to meet its investment objective, the Fund may invest in derivative instruments, such as futures contracts, that provide exposure to equity securities, including volatility in the equity markets.

Asset Class Weightings (% total net assets)

■ Other Assets & Liabilities, Net 87.0%
■ U.S. Treasury Securities 13.0%

Derivative Exposure

(% total net assets)
